GRADE		12	
DATE		NOVEMBER 2025	
SUBJECT		INFORMATION TECHNOLOGY	
PAPER		1	
MARK TOTAL		150	
DURATION (HOURS)		3	
NUMBER OF PAGES		26	

SOUTH AFRICAN COMPREHENSIVE ASSESSMENT INSTITUTE
SUID-AFRIKAANSE KOMPREENSIEWE ASSESSERINGSINSTITUUT

INSTRUCTIONS AND INFORMATION

- The question paper consists of four sections (four questions).
SECTION A: GENERAL PROGRAMMING SKILLS
SECTION B: SQL AND ADO-DATABASE PROGRAMMING
SECTION C: OBJECT-ORIENTED PROGRAMMING
SECTION D: PROBLEM SOLVING PROGRAMMING
- Save your work at regular intervals as a precaution against power failures.
- Make sure that you enter your exam number as a comment on the third line in each program (**QUESTION 1** to **QUESTION 4**) unit, AS WELL AS in the class unit (**QUESTION 3**).
- Answer only what is asked in each question. For example, if the question does not ask for data validation, then no marks will be awarded for the data validation.
- Routines must be developed from first principles. You may **NOT** use the built-in features of Delphi for any of these routines:

String handling:	Arrays:	Max/min, Remove
Substring, Split, Stringlist, Comparestr,	SQL:	Datediff
Stringreplace, Stringtointdef, Reversestring,	ADO:	Locate, Sort, Filter, Search
Shl-function for movement in a string,	Text files:	LoadFromFile
Stringofchar		
- Non-programmable pocket calculators may be used.
- You may comment out a specific part of your code if that part doesn't compile. All commented code will be marked if there is no alternative code.
- Notes on Question 2:
Field names for the tables are included as comments, you may copy and paste these field names in your answers for question 2.
- During the control session, you should check all your units, namely **Question1_U**, **Question2_U**, **clsQuestion3_U**, **Question3_U** and **Question4_U**.
 - Can the project open and run?
 - Is your exam number entered as a comment in the unit?
- Two blank pages are included at the back of the paper for planning purposes.

11. The files you need to complete **QUESTION 1** to **QUESTION 4** can be found in the **'Data_Nov2025'** folder.

Rename this folder using your **exam number. e.g. 2589911_ Nov2025.**

It is your responsibility to ensure that all the listed files are visible in your exam data folder before the three-hour examination commences.

Question1:

Indicators.jpg
 Question1_p.dpr
 Question1_p.dproj
 Question1_p.res
 Question1_u.dfm
 Question1_u.pas
 PollutionData.txt

Question2:

RedGreen.mdb
 RedGreenBCK.mdb
 Question2_p.dpr
 Question2_p.dproj
 Question2_p.res
 Question2_u.dfm
 Question2_u.pas
 DBConnection_U.pas

Question3:

clsQuestion3_u.pas
 Question3_p.dpr
 Question3_p.dproj
 Question3_p.res
 Question3_u.dfm
 Question3_u.pas

Question4:

Question4_p.dpr
 Question4_p.dproj
 Question4_p.res
 Question4_u.dfm
 Question4_u.pas

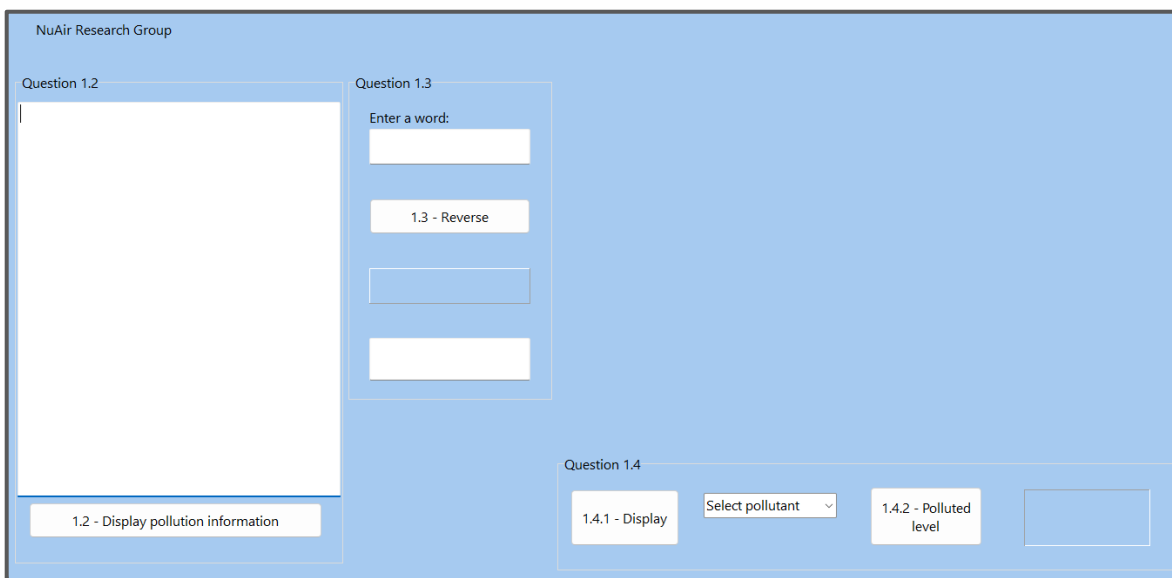

SECTION A: GENERAL PROGRAMMING SKILLS

QUESTION 1

A research team investigating pollution requires a set of small software applications to assist with their work.

- Open the incomplete **Question1_p.dpr** program in your **ExamNumber_Nov2025/Question1** folder.
- Add your exam number as a comment on the third line of the program unit.
- Write code to complete **QUESTION 1.1 to QUESTION 1.4** as instructed in the question paper.

Graphical user interface:

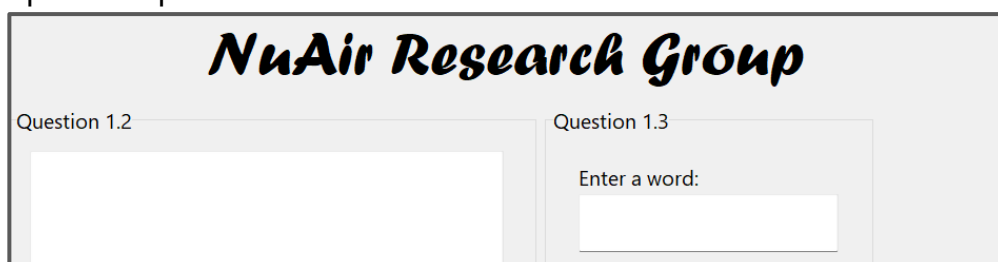

1.1 [Onactivate event handler]

Write code to do the following:

- Change the colour of the **frmQuestion1** form to **'btnFace'**.
- Change the appearance of the heading of the **IbIQ1_1** label to font type 'Forte' and size 36 pt.
- Set the x-position of the **IbIQ1_1** label to 200.

Example of output:

(4)

1.2 Button [1.2 – Display pollution information]

Research data on pollution is stored in a text file, called **PollutionData.txt**.

Write code to do the following:

- Open the text file.
- Add an ‘*’ (asterisk) in front of each line in the text file.
- Display all the lines in the text file in the **memQ1_2** memo.

NOTE: You do not have to test if the file exists.

Example of output:

```

Question 1.2
* Pretoria,Water,Mercury: 0.001 mg/L,2023
* Rustenburg,Air,Ozone: 0.05 ppm,2022
* Margate,Air,PM10: 19 Åµg/mÅ³,2022
* Port Elizabeth,Air,PM2.5: 15 Åµg/mÅ³,2023
* Port Elizabeth,Water,Cadmium: 0.001 mg/L,2022
* Johannesburg,Air,PM2.5: 22 Åµg/mÅ³,2023
* Cape Town,Water,Lead: 0.008 mg/L,2022
* Bloemfontein,Air,SO2: 0.01 ppm,2023
* Kimberley,Air,Sulfate: 4.5 ppb,2023
* Durban,Air,Sulfur dioxide: 0.03 ppm,2022
* Port Elizabeth,Water,Cadmium: 0.003 mg/L,2021
* Bloemfontein,Water,Mercury: 0.002 mg/L,2023
    
```

(7)

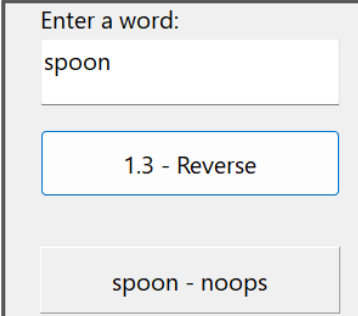

1.3 Button [1.3 – Reverse]

The research team enjoys playing word games.

1.3.1 Write code to do the following:

- Retrieve the word entered from the **edtQ1_3_1** edit box.
- Reverse the word, e.g. ‘Holiday’ changes to ‘yadiloH’.
- Display both words on the **pnIQ1_3_1** panel with a - (hyphen) between the words.

Example of output:

Enter a word:
 spoon

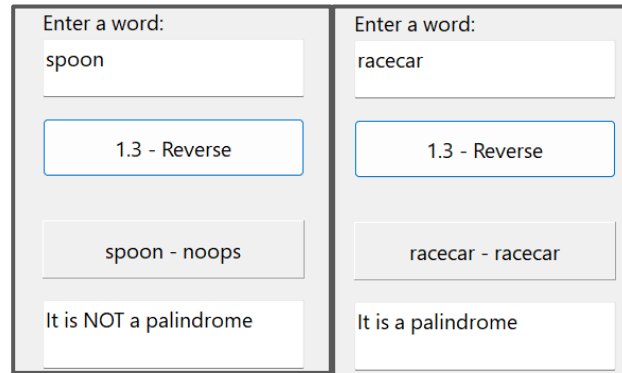

1.3 - Reverse

spoon - noops

(8)

- 1.3.2 • Display the message ‘It is a palindrome’ in the **edtQ1_3_2** edit box if the reversed word is the same as the original word.
- Display the message ‘It is NOT a palindrome’ in the **edtQ1_3_2** edit box if the reversed word is not the same as the original word.

Examples of output:

(6)

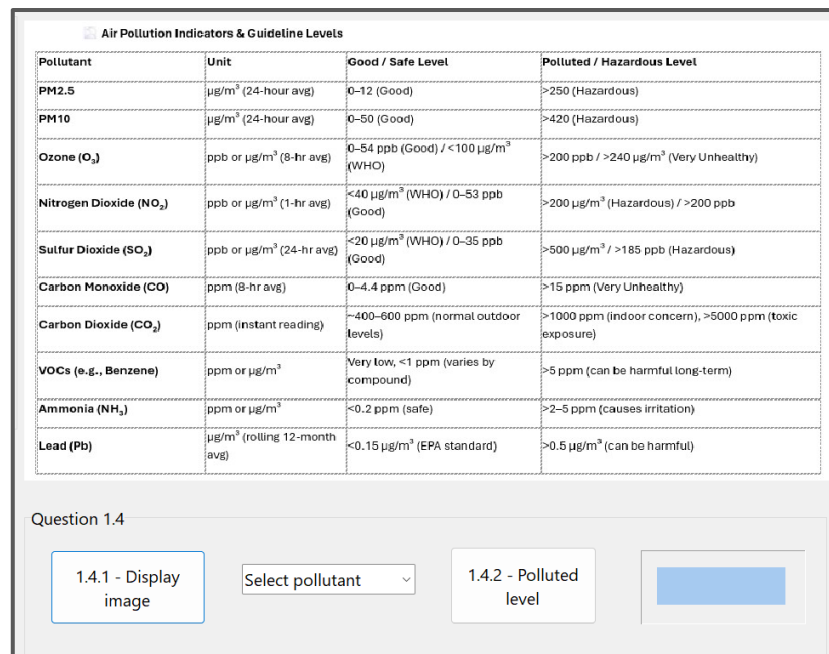

1.4 A table with pollution indicators is saved as an image file named: ‘Indicators.jpg’.

1.4.1 **Button [1.4.1 – Display]**

Write code to:

- Display the picture in the **imgQ1_4** image component.
- Ensure that the image fills the component completely.

Example of output:

(2)

1.4.2 **Button [1.4.2 – Polluted level]**

The extent of pollution needs to be measured.

Write code to do the following:

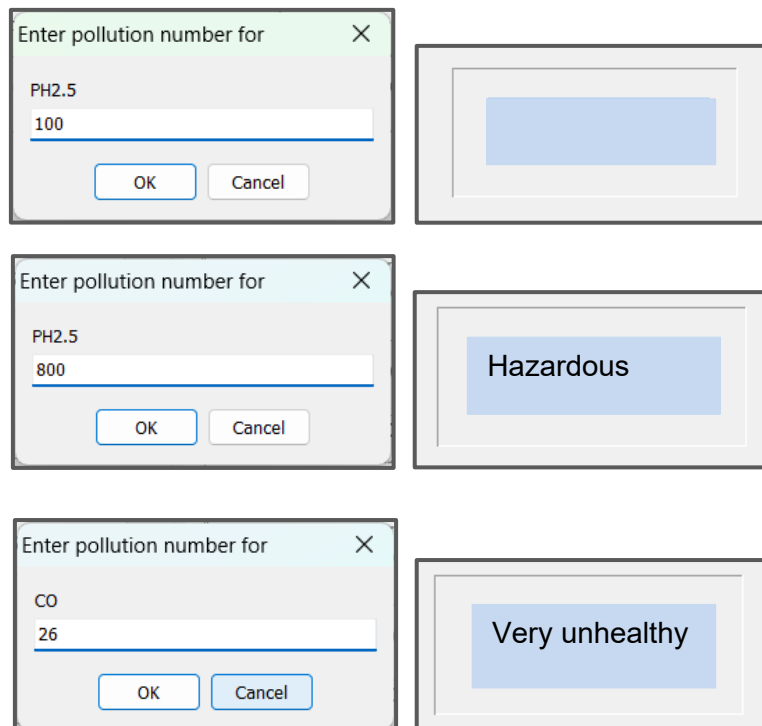

- Retrieve the selected pollutant from the **cmbQ1_4_2** combo box.
- Use a dialogue box (input box) to enter the pollution reading for the selected pollutant. Show the heading “Enter pollution number for” as well as the selected pollutant as part of the input box.
- Remember, a real number can be entered as a reading.
- Use the table below to determine the hazardous level.
- Display the hazardous level on the **lblQ1_4_2** label.
- Change the label’s colour to red if the level is ‘hazardous’ or ‘very unhealthy’.

NOTE: It is not necessary to reset the colour of the label.

The following table is used to determine the hazardous level.

Pollutant	Pollution reading	Hazardous level
PH2.5	>250	Hazardous
PH10	>420	Hazardous
O ₃	>500	Very unhealthy
NO ₃	>200	Hazardous
SO ₃	>500	Hazardous
CO	>15	Very unhealthy

Examples of output:

(14)

TOTAL SECTION A: [41]

SECTION B: SQL AND ADO-DATABASE PROGRAMMING

QUESTION 2

Information on traffic offences are saved in the database **RedGreen.mdb**

The database consists of four tables:

NOTE: You will only use **one** or **two** tables for a given question at any point.

The design and content of the **RedGreen.mdb** database are attached at the end of the question paper.

- Open the incomplete **Question2_p.dpr** program in your **ExamNumber_Nov2025/Question2** folder.
- Add your exam number as a comment on the third line of the program unit.
- Write code to complete **QUESTION 2.1** (SQL) and **QUESTION 2.2** (ADO database management) as instructed in each section.
- The '**Restore database**' button is provided to restore the data in the database to the original content.

NOTE: Code is provided to connect the database to Delphi. The database is password protected, so you will not be able to access it directly.

The following form class variables are declared:

```
tblDrivers, tblOffences, tblGroupCodes, tblOffenceCodes: TADOTable;
```

The table names and field names are provided as commented code to copy into your answers.

2.1 Tab sheet [Question 2.1 - SQL]

Type your SQL statement in the provided code between the ' ' of the line:

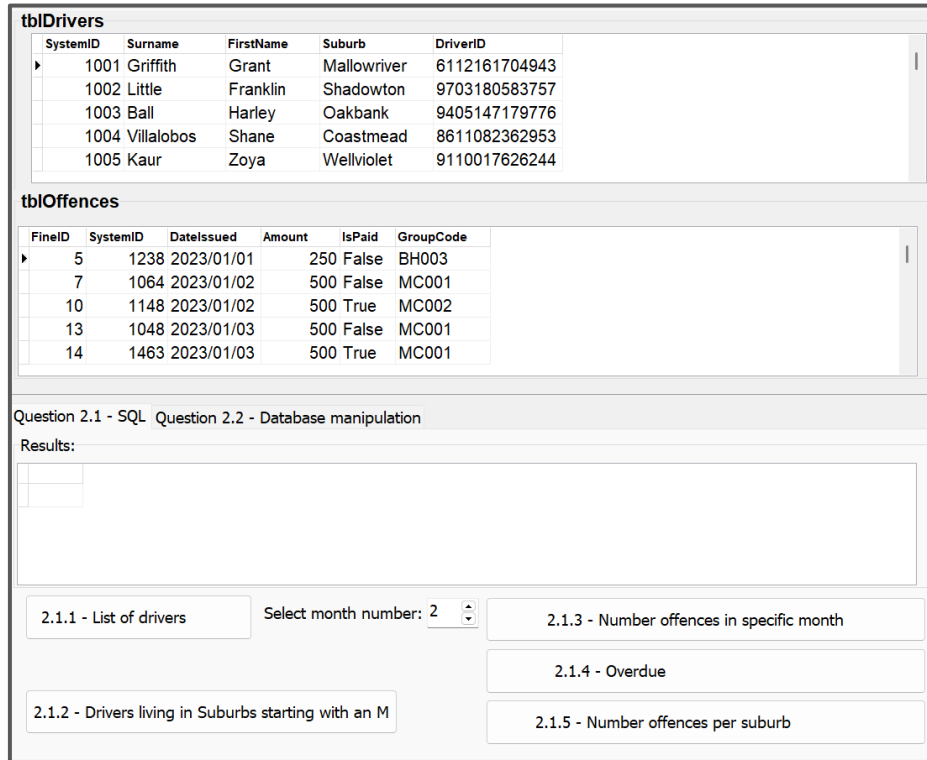

```
SQLQry := ' ';
```

Code has been provided to execute the SQL statements.

SQL statements **MUST** be used to answer question 2.1.1 to question 2.1.5.

NO marks will be allocated if Delphi code constructs are used.

Graphical user interface for QUESTION 2.1:

tblDrivers

SystemID	Surname	FirstName	Suburb	DriverID
1001	Griffith	Grant	Mallowriver	6112161704943
1002	Little	Franklin	Shadowton	9703180583757
1003	Ball	Harley	Oakbank	9405147179776
1004	Villalobos	Shane	Coastmead	8611082362953
1005	Kaur	Zoya	Wellviolet	9110017626244

tblOffences

FineID	SystemID	DateIssued	Amount	IsPaid	GroupCode
5	1238	2023/01/01	250	False	BH003
7	1064	2023/01/02	500	False	MC001
10	1148	2023/01/02	500	True	MC002
13	1048	2023/01/03	500	False	MC001
14	1463	2023/01/03	500	True	MC001

Question 2.1 - SQL Question 2.2 - Database manipulation

Results:

2.1.1 - List of drivers Select month number: 2 2.1.3 - Number offences in specific month

2.1.2 - Drivers living in Suburbs starting with an M 2.1.4 - Overdue

2.1.5 - Number offences per suburb

2.1.1 Button [2.1.1 – List of drivers]

Write an **SQL** statement to display all the records from the **tblDrivers** table.

An example of output for the first four records:

SystemID	Surname	FirstName	Suburb	DriverID
1001	Griffith	Grant	Mallowriver	6112161704943
1002	Little	Franklin	Shadowton	9703180583757
1003	Ball	Harley	Oakbank	9405147179776
1004	Villalobos	Shane	Coastmead	8611082362953

(2)

2.1.2 Button [2.1.2 – Drivers living in Suburbs starting with an M]

Write an **SQL** statement to display the **SystemID**, **Surname** and **Suburb** of drivers who live in suburbs starting with the letter M.

An example of output for the first four records:

SystemID	Surname	Suburb
1001	Griffith	Mallowriver
1024	Davenport	Mallowriver
1041	Hartman	Mistwick
1105	York	Mallowwyvern

(4)

2.1.3 **Button [2.1.3 – Number of offences in specific month]**

Write an **SQL** statement to display the date issued and group code, from **tblOffences** table, for all offences that occurred in the month selected in the **spnQ2** spin edit control.

Example output:

Select month number: 2

DateIssued	GroupCode
01/02/2023	MC090
02/02/2023	BH004
02/02/2023	MC001
03/02/2023	MC001

(3)

2.1.4 **Button [2.1.4 – Overdue]**

Write an **SQL** statement that displays the **SystemID**, the **Amount** (labelled as 'Amount' in currency format), and the **DateIssued** for all fines that are unpaid and have been overdue by more than 45 days. Use the current date to determine which fines are overdue.

An example of output for the first four records:

SystemID	Amount	DateIssued
1238	R250.00	2023/01/01
1064	R500.00	2023/01/02
1048	R500.00	2023/01/03
1119	R500.00	2023/01/04

(5)

2.1.5 **Button [2.1.5 – Number offences per suburb]**

Write an **SQL** statement to count the number of offences in each suburb and display the total as 'Number of offences per suburb'.

TIP: You will use the **tblOffences** and **tblDrivers** tables as part of your SQL statement.

Example of output for the first four records:

Suburb	Number of offences per suburb
Aldlake	79
Aldmoor	76
Baybush	24
Baycliff	21

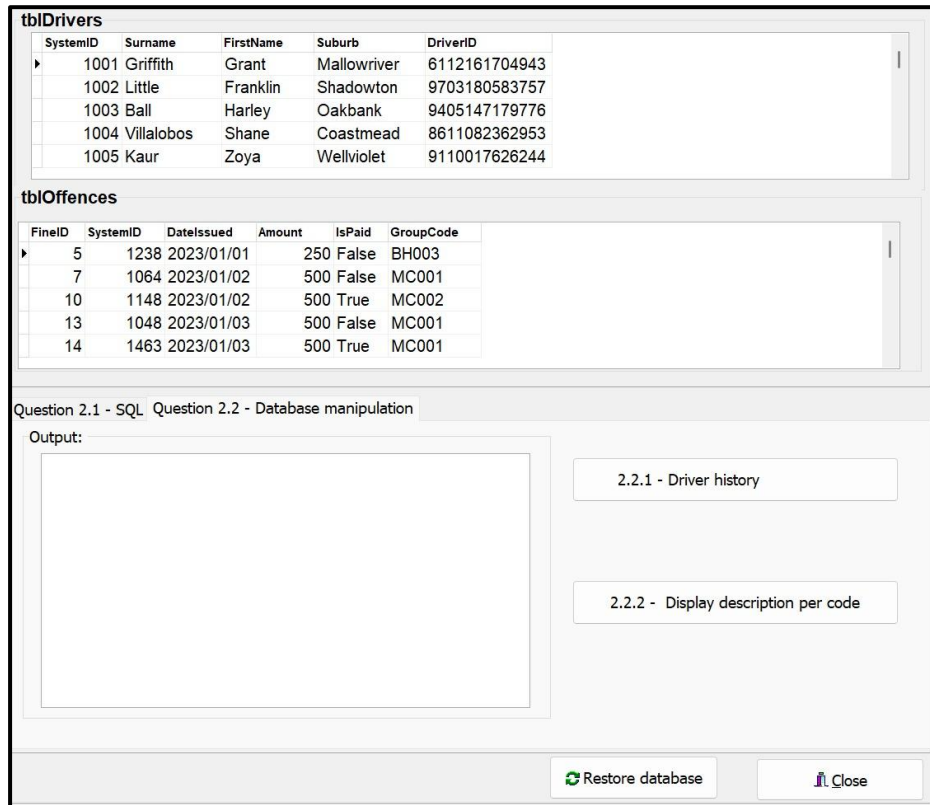

(5)

[19]

2.2 Tab sheet [Question 2.2 - DB Operations]

NOTE: NO marks will be awarded for SQL statements in QUESTION 2.2.

Graphical user interface for QUESTION 2.2.

2.2.1 Button [2.2.1 – Driver history]

Write code to do the following:

- Display the currently selected driver’s surname and first name as part of a heading with the following format in the **redQ2** rich edit:
OUTSTANDING FINES FOR: <Surname>, <Firstname>
- Display the **FineID**, **DateIssued**, and **Amount** of all unpaid fines for the currently selected driver in the **redQ2** rich edit, in neat columns.
- Count the number of paid fines and display the result below the list of fines, as shown in the example below.

```

OUTSTANDING FINES FOR: Griffith, Grant

FineID Date Issued Amount
4580 2024/05/06 R500.00
6575 2022/05/01 R250.00
9016 2025/06/01 R500.00

Number of PAID fines for this driver: 7
    
```

(11)

2.2.2 **Button [2.2.2 – Display description per code]**

Write code to display the **GroupCode** (in bold) and the **Description** fields for the first three records from the **tblGroupCodes** table in the **redQ2** rich edit.

Example of output:

BH001 Speeding
BH002 Minor offence
BH003 Illegal behaviour

(8)

[19]

TOTAL SECTION B: [38]

SECTION C: OBJECT-ORIENTED PROGRAMMING

QUESTION 3

- Open the incomplete **Question3_p.dpr** program and **clsQuestion3_u.pas** unit in your **ExamNumber_Nov2025/Question3** folder.
- Add your exam number as a comment on the third line of the program and class unit.
- Write code to complete **QUESTION 3.1** and **QUESTION 3.2** as instructed in the question paper.

Graphical user interface:

3.1

A service disruption management system is needed to monitor and manage different types of service disruptions (electrical, water, and garbage) across a municipality. Each disruption is evaluated based on its type, duration, day of occurrence, and level of severity to calculate priority and determine appropriate status.

An incomplete object class **TDisruption** is provided in the **clsQuestion3_U.pas** unit.

You may NOT add any attributes (fields) or methods except when specifically indicated in a question.

The attributes of the disruption object have been declared as follows:

ATTRIBUTE/PROPERTY	DESCRIPTION
fServiceType	The type of service affected (E - Electrical, W - Water, G - Garbage)
fDuration	The number of full hours the disruption is expected to last
fWeekday	The day of the week when the disruption will occur
fLevel	A value from 1 to 5 indicating the severity level of the disruption
fIsPlanned	A Boolean value indicating whether the disruption is planned (true) or an emergency (false)

Complete the code in the object class, **TDisruption**, as described in **QUESTION 3.1.1** to **QUESTION 3.1.5** below.

- 3.1.1 Write code for a constructor method, **a_Create**, to receive the service type, duration, weekday, and level as parameters and do the following:
- Assign the parameter values to the respective attributes.
 - Assign the value of TRUE to the **fIsPlanned** attribute. (5)
- 3.1.2 Write code for an accessor method called **b_getLevel** that will return the value of the **fLevel** attribute. (2)
- 3.1.3 Write code for a method called **c_calcPriority** that will calculate and return the priority of the disruption as an integer, based on the service type (**fServiceType**) and level (**fLevel**) attributes.
The priority is calculated as follows, for:
- Electrical service (type 'E'): Priority = **fLevel** × 30
 - Water service (type 'W'): Priority = **fLevel** × 25
 - Garbage service (type 'G'): Priority = **fLevel** × 10 (6)
- 3.1.4 Write code for a method called **d_setEmergency** that will:
- Set the **fIsPlanned** attribute to FALSE.
 - Increase the **fLevel** attribute by 1 if it is less than 5. (3)

3.1.5 A partially completed method called **e_determineStatus** has been provided. Code has been provided to set the status to 'Normal'.

Add code to complete the method using the **fIsPlanned** and **fLevel** attributes to establish the current status of the disruption according to the following rules:

STATUS	CONDITION
Emergency	If fIsPlanned is FALSE
Minor	If fIsPlanned is TRUE and fLevel is 1 or 2
Moderate	If fIsPlanned is TRUE and fLevel is 3 or 4
Major	If fIsPlanned is TRUE and fLevel is 5
Normal	All other cases

(7)

NOTE: A complete **toString** method has been provided. You will use this method later in question 3.2.3

[23]

3.2 An incomplete form class called **frmQuestion3_U** has been provided in the **Question3_U.pas** unit.

The following declarations have been provided may be used in your answer:

- Const
arrWeekdays: array[1..7] of string =
('Monday', 'Tuesday', 'Wednesday', 'Thursday',
'Friday', 'Saturday', 'Sunday')
//represents all the days in a week
- objDisruption : TDisruption
//to represent the object
- sType, sWeekday: string
//represents the service type and day of the week of a
disruption
- iLevel, iDuration: Integer;
//represents the level and hours that the disruption will last

3.2.1 a) **Button [3.2.1a - Set Random values]**

Write code to do the following:

- Assign a random value between 1 and 12, both included, to the duration and display the random value in the **sedQ3_2_1** spin edit box.
- Assign a random day from the **arrWeekdays** array to the **sWeekday** variable.
- Assign a random value between 1 and 5, both included, to the **iLevel** variable and display the random value on the **rdgQ3_2_1** radiogroup.

Examples of possible output (your answers will differ because it is randomly assigned):

<p>Question 3.2.1</p> <p>Service Type: <input type="text" value="E - Electrical"/></p> <p>Duration: <input type="text" value="11"/></p> <p>Weekday: <input type="text" value="Thursday"/></p> <p>Level: <input checked="" type="radio"/> 1, <input type="radio"/> 2, <input type="radio"/> 3, <input type="radio"/> 4, <input type="radio"/> 5</p>	<p>Question 3.2.1</p> <p>Service Type: <input type="text" value="E - Electrical"/></p> <p>Duration: <input type="text" value="7"/></p> <p>Weekday: <input type="text" value="Thursday"/></p> <p>Level: <input type="radio"/> 1, <input type="radio"/> 2, <input type="radio"/> 3, <input type="radio"/> 4, <input checked="" type="radio"/> 5</p>
<p>Question 3.2.1</p> <p>Service Type: <input type="text" value="E - Electrical"/></p> <p>Duration: <input type="text" value="3"/></p> <p>Weekday: <input type="text" value="Wednesday"/></p> <p>Level: <input type="radio"/> 1, <input type="radio"/> 2, <input checked="" type="radio"/> 3, <input type="radio"/> 4, <input type="radio"/> 5</p>	<p>Question 3.2.1</p> <p>Service Type: <input type="text" value="E - Electrical"/></p> <p>Duration: <input type="text" value="4"/></p> <p>Weekday: <input type="text" value="Monday"/></p> <p>Level: <input type="radio"/> 1, <input type="radio"/> 2, <input type="radio"/> 3, <input checked="" type="radio"/> 4, <input type="radio"/> 5</p>

(3)

3.2.1 b) **Button [3.2.1b - Instantiate object]**

Write code to do the following:

- Retrieve the value the user selected from the combo box.
- Instantiate a **TDisruption** object, called **objDisruption**, passing the generated and selected values over as parameters.

Code is provided for the following output:

(3)

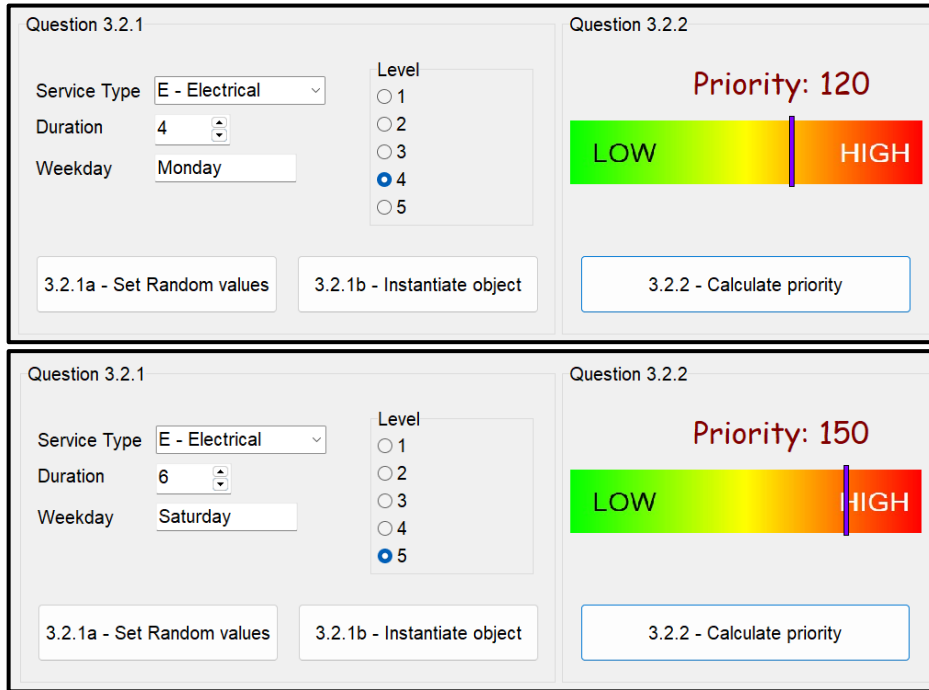

3.2.2 **Button [3.2.2 – Calculate priority]**

Write code to do the following:

- Call the **objDisruption** object's **c_calcPriority** method to determine the priority value.
- Move the **shpQ3_2_2** shape horizontally on the priority scale using the following pseudocode as reference:

$$\text{Left position of shpQ3_2_2} = 7 + (\text{priority} \times 2)$$
- Display the **objDisruption** object's priority on the **lblQ3_2_2** label in the format: "Priority:" + [value].

Examples of possible output:

The image displays two screenshots of a software interface, labeled 'Question 3.2.1' and 'Question 3.2.2'. Each screenshot shows a form with the following fields:

- Service Type:** A dropdown menu set to 'E - Electrical'.
- Duration:** A numeric input field.
- Weekday:** A text input field.
- Level:** A vertical list of radio buttons numbered 1 to 5.

Below the form are two buttons: '3.2.1a - Set Random values' and '3.2.1b - Instantiate object'. To the right of the form is a section for 'Question 3.2.2' which displays:

- Priority:** A numerical value (120 in the top screenshot, 150 in the bottom screenshot).
- Visual Indicator:** A horizontal bar with a color gradient from green on the left (labeled 'LOW') to red on the right (labeled 'HIGH'). A vertical line indicates the current priority level.
- Action:** A button labeled '3.2.2 - Calculate priority'.

(4)

3.2.3 Button [3.2.3 – Check Emergency]

The user must select the service type from the **cmbQ3_2_3** combo box and enter the status in the **edtQ3_2_3** edit box.

Code has been provided to retrieve the service type from the **cmbQ3_2_3** combo box and the status entered in the edit box, **edtQ3_2_3**.

Write code to do the following:

- Check if the selected service type matches the **objDisruption** object's original service type (**sType**).
- Test if the entered status is not an 'Emergency'
- Do the following if both previous conditions are true:
 - Call the **d_setEmergency** method to update the disruption object
 - Display the updated object's information using **toString** method in the **redQ3** rich edit box.
 - Add a line showing the status by calling the **e_determineStatus** method.
- Display the message, "Cannot upgrade: Service type mismatch or already emergency", if either condition is false.

Examples of possible output:

Question 3.2.1

Service Type:

Duration:

Weekday:

Level: 1 2 3 4 5

3.2.1a - Set Random values 3.2.1b - Instantiate object

Question 3.2.2

Priority: 50

LOW
HIGH

3.2.2 - Calculate priority

Question 3.2.3

Service Type:

Status:

3.2.3 - Check Emergency

Service Type: W - Water (Water)
 Duration: 8 hours on Wednesday
 Level: 4 (Emergency)
 Status: Emergency

Question 3.2.1

Service Type:

Duration:

Weekday:

Level: 1 2 3 4 5

3.2.1a - Set Random values 3.2.1b - Instantiate object

Question 3.2.2

Priority: 50

LOW
HIGH

3.2.2 - Calculate priority

Question 3.2.3

Service Type:

Status:

3.2.3 - Check Emergency

Cannot upgrade: Service type mismatch or already emergency

(7)

[17]

TOTAL SECTION C: [40]

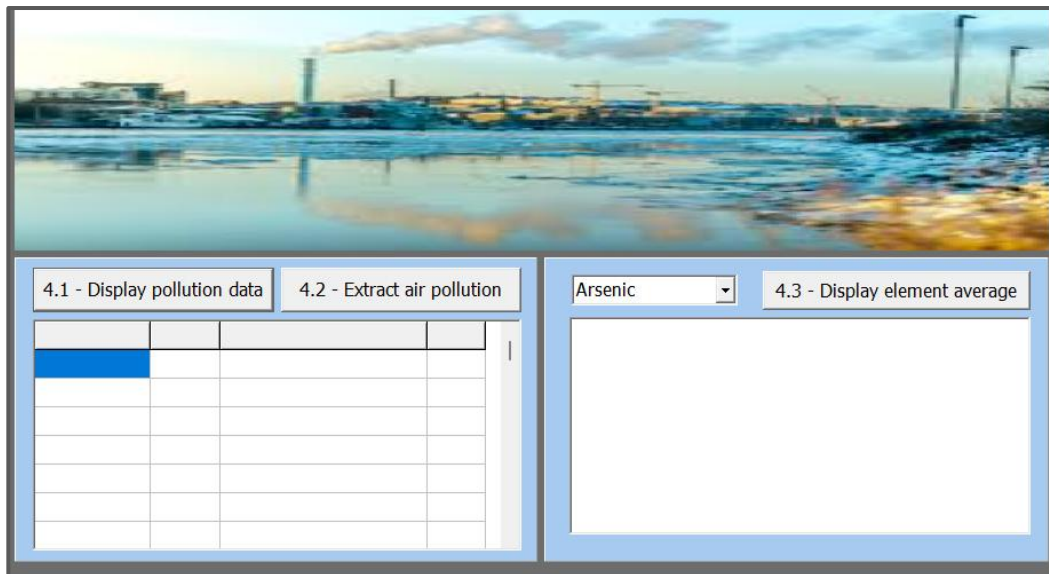

SECTION D: PROBLEM SOLVING PROGRAMMING

QUESTION 4

- Open the incomplete **Question4_p.dpr** program in your **ExamNumber_Nov2025/Question4** folder.
- Add your exam number as a comment on the third line of the program unit.
- Add code to complete **QUESTION 4.1 – QUESTION 4.3** as instructed in the question paper.
- Do not change any provided code and save your work regularly.

Riverport is a mid-sized town located near a river and surrounded by hills. It hosts several industries, including a steel factory, a chemical manufacturing plant, and a coal-fired power station. The Environmental Monitoring Agency conducted a recent study on Riverport's air and water quality.

Graphical user interface:

Study the given declarations in the program as well as the following declarations, which have been provided, that you must use in your answers.

- `arrPollutionData: array[1..50,1..4] of string;`
//Represents the general pollution information
//Currently there are (28) rows of data with some empty rows
- `arrWaterData: array[1..25,1..3] of string;`
//Represents the water pollution information
//Currently there are (10) rows of data with some empty rows
- `arrAirData: array[1..25,1..3] of string;`
//Represents the air pollution information
//Contains no data currently
- `arrHeadings: array[1..4] of string;`
//Represents the headings for the string grid

4.1 Button [4.1 - Display pollution data]

Write code to display the data in **arrPollutionData** in the **stgQ4_1** string grid, with the headings as provided in **arrHeadings**.

Use the given **iRow** and **iCol** variables as part of your solution.

Example of output:

Location	Type	Level	Year
Port Elizabeth	Air	Ozone: 0.05 ppm	2024
Kimberley	Water	Arsenic: 0.0015 mg/L	2025
Pretoria	Air	NO2: 27 $\mu\text{g}/\text{m}^3$	2025
Durban	Water	Arsenic: 0.005 mg/L	2025
Johannesburg	Water	Arsenic: 0.010 mg/L	2025
Sasolburg	Air	Benzene: 1.5 ppb	2025
Polokwane	Air	PM2.5: 23 $\mu\text{g}/\text{m}^3$	2025

(5)

4.2 Button [4.2 – Extract air pollution]

The **arrAirData** array must be populated using the **arrPollutionData** array.

The type column indicates the type of pollution and only records that indicate **Air** should be transferred from the **arrPollutionData** array to the **arrAirData** array. In addition, only the latest (most recent) reading per location should be transferred.

The columns in the **arrPollutionData** array respectively represent the:

<Location>,<Pollution Type>,<Pollution Level>,<Year>

The columns in the **arrAirData** array respectively represent the:

<Location>,< Pollution Level>,<Year>

The following variable is declared and may be used in your answer:

- **iCountAir** to count the number of rows added to the **arrAirData** array.

Write code to extract and store the latest data for air type pollution in the provided **arrAirData** array.

For example, Cape Town has two air pollution readings; only the data for the latest available year (2024) should be added to the **arrAirData** array.

A message should inform the user how many rows have been stored to the **arrAirData** array.

NOTE: The content of the **arrAirData** array is not to be displayed.

Example of message:

(15)

4.3 Button [4.3 - Display element average]

Write code to do the following:

- Retrieve the value the user selected from the combo box.
- Go through **arrWaterData** 2D-array and calculate the average pollution of the selected element.

Examples of output

NOTE: Code is provided to display output:

(11)

TOTAL SECTION D: [31]

GRAND TOTAL: [150]

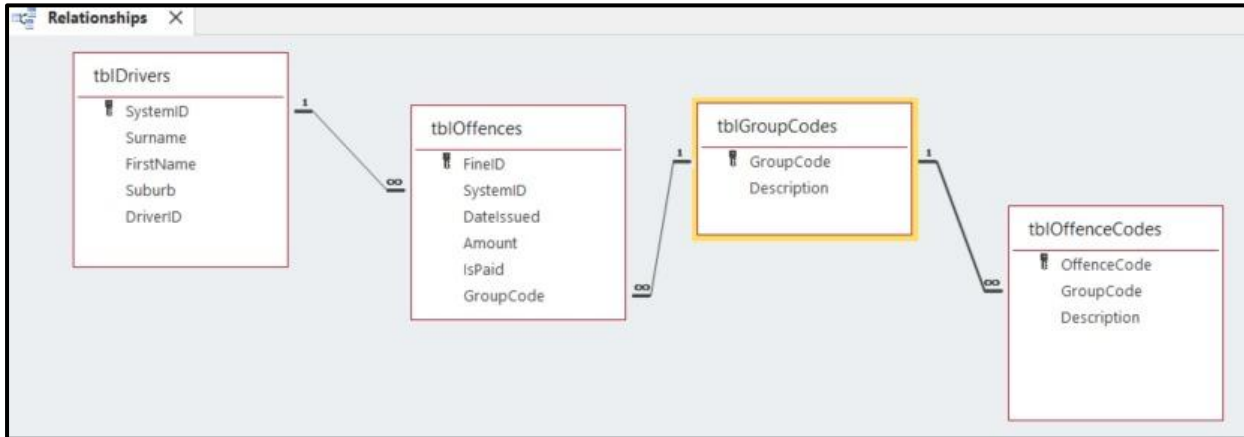

DATABASE INFORMATION QUESTION 2:

The database **RedGreen.mdb** consists of four tables.

tblDrivers
tblGroupCodes
tblOffenceCodes
tblOffences

The following one-to-many relationship with referential integrity exists between the database tables that is needed to answer the question:

tblDrivers table: Design view

Field Name	Data Type
